614 /1/ Cancuc is a Tzeltal town of Chiapas, Mexico, whose
[101] social organization is based on exogamous patrilineal clans.
[776] These clans are intimately related to: 1) the nagual or guardian
[551] spirit, which is given the name of lab among the Indians of this
[613] region; 2) the native surnames that constitute the lineages within
[621] the clans; 3) the "barrios," as the Spanish chroniclers called the endogamous tribal subdivisions (called calpulli among the Aztecs and culibal in Cancuc); 4) the kinship system; and 5) the behavior.

614 All the individuals belonging to a clan consider themselves
601 "legitimate siblings" /Sp. "hermanos legítimos"/, using the terms that designate this class of relatives. This theoretical consanguineous kinship is expressed by means of the word chapomal -- a Cancuquero /a person from Cancuc/ calls another "brother" be-
614 cause he is his chapomal. This form of usage is indicative of
601 common ancestry, something that we were not able to clarify, as
124 our questions on this point only received answers that showed that
829 they had lost any notion of a real or mythical ancestor. Our informants invariably explained this situation with the expressions: "it is the custom," "San Juan /Saint John/ (Patron Saint of Cancuc) ordered it so," or "it was ordered by Manuel (God)." What does constitute a clear concept in the minds of all is that "formerly" each clan lived in a cave, from which its members went out in the form of human beings to populate the earth and in which lived the naguales, or lab, that bound them to their place of origin.
[775] The soul came back to this cave after death. There are as many caves as the number of clans.

614 The children belonged to the paternal clan. A woman who marries does not become a member of the clan of her husband.

/2/ Exogamy is strictly respected; persons belonging to the same clan never marry each other.

[591] The clans are not local, as their members live in all of the places and rancherías.

[178] At present the clans lack chiefs, this institution having dis-
[669] appeared about 30 years ago, according to all our information, when the zone that we are studying underwent a chaotic period due to political revolts.

/5 cont./

551 614 The great majority of the native surnames could not be translated by our informants, who asserted that they did not signify anything in the Tzeltal language. Those for which we could obtain the meaning are: Chan ... snake, of the Ijká clan; Chij ... deer, of the Chik clan; Uax ... wildcat, of the Boj clan; Chikin ... ear, of the Chik clan; and Lot ... lie /Sp. mentira, lie, story, error/, of the Ijká clan.

428 424 551 613 614 The surnames are inherited through the paternal line and constitute the lineages within each clan. The lands formerly belonged to the lineage and could not be alienated. This custom is tending to disappear in recent times, but even today we have found several cases in which only an individual belonging to the lineage can occupy land that has been left without an owner when one has died without leaving male descendants.

166 551 553 614 A native from another municipality or group who comes to Cancuc with the aim of settling down in it must be incorporated into one of the clans, for which it is necessary to change his native surname for a Cancuc one. (The different native groups of this central region of the State of Chiapas have surnames that differ among themselves, and it is through them that their place of origin is shown.) Generally he keeps the Spanish surname and takes a native surname that in Cancuc corresponds to that. One Gómez Tzima from Oxchuc became Gómez Uotán of the Chejeb clan of Cancuc. One Aguilar belongs to the Chik clan, like all the Aguilar of Cancuc. One Santis Kujul, the small son of an Oxchuquero and a woman from Cancuc, gave up his surname from Oxchuc when his father died and his mother's family incorporated him into the Ijká clan, changing the native surname Kujul for that of Lul, "so that he will be from here, and have his chapomales here, and marry here," his maternal aunt of the Chik clan explained to us. These cases are rare. We could not find out before whom these incorporations are carried out. One informant, born (829) in Cancuc, whose paternal grandfather /6/ had come from the municipality of Tenejapa, told us that he had heard his father say that "in the old times the old people arranged that."

/6 cont./

	Ajkol-culibal	Alán-culibal
551 621 614	19 Chik	14 Chik
	13 Chejeb	18 Chejeb
	22 Ijká	6 Ijká

/7/ Among the Spanish surnames we have 6 that belong exclusively to Alán- and 6 to Ajkol-culibal (not counting the case in which a native surname of the Chik clan is joined to two different Spanish surnames that are found in both culibales). The remaining 14 Spanish surnames are combined with surnames from the two culibales.

621 582 178 174 551 Today the culibal is not endogamous, but we believe it possible that it was in former times (as we have found in recent investigations of the Tzotzil group of San Pablo Chalchihuitán of this region). The present possibility of changing residence and the incorporation of native surnames originating from a culibal (or perhaps two) that have disappeared within the boundaries of the two remaining make the reconstruction of the pre-Hispanic 621 582 551 culibal impossible in this case. According to the data obtained in our census, 62.5 o/o of the marriages were concluded between persons whose native surnames originated from the same culibal. [125] [166] [613] In spite of the low percentage, nevertheless the custom of marriage between people of the same culibal predominates (we should not forget the mobility permitted in recent times, because of which residents of one culibal are persons whose lineages originate from the other), although cases of marriage between persons belonging [614] to the two different culibales also abound. It is almost always preferred to look for a wife among the women of the same place or rancheria, but at present we can say that clan exogamy is the only thing that regulates marriage.

621 622 [631] [614] [65] Each culibal has its own chiefs, elected from and by those members who have filled political-religious positions in the Chakel or Ayuntamiento /municipal government/. The clans are taken into account in this election, rigorously taking turns. The culibal chiefs assign the communal lands, organize the collective tasks for the benefit of the community, pray for the health and

/11 cont./

60 and mu (brother-in-law) instead of kichán, preference being given to the relationship through the paternal lineage or clan over the term corresponding to this consanguineous relative, but of the maternal clan. This rule is applied to any relative by affinity, with the exception of parents-in-law, sons-in-law, and daughters-in-law, even though in referring to these relatives one hears said: "my mother-in-law is my sister" or "my father-in-law is my chapomal." The terms that designate the son-in-law (nial) and the daughter-in-law (kalib) are used by both EGOS; but not their reciprocals, which not only take into account the sex of the relative, but also the sex of EGO. These reciprocals are compound forms, formed by the above plus the suffixes mamal (old man) and meel (old woman) for father-in-law and mother-in-law, respectively: nial-mamal (father-in-law) and nial-meel (mother-in-law) for parents-in-law of a male EGO, and kalib-mamal (father-in-law) and kalib-meel (mother-in-law) for parents-in-law of a female EGO. The brothers of parents-in-law are named in the same way, even though there is a tendency to limit this nomenclature to the collateral parents-in-law, calling the father-in-law's sister "sister-in-law," and the mother-in-law's brother simply "gentleman" /Sp. "señor"/ (tatik), the same as a non-relative. The terms used in the designation of the brothers-in-law and sisters-in-law are three: a man calls his wife's brother and his sister's husband bal; a woman calls her husband's sister and her brother's wife jauán, and mu is used by a man and a woman to designate a sibling-in-law of the opposite sex, that is to say, wife's sister, a woman's sister's husband, the husband's brother, and a man's brother's wife. The terms for brothers-in-law and sisters-in-law are extended so far as to include all of the members of the clan to which the spouse belongs.

[614] [613] In this kinship system we see how the nomenclature is primordially based on the grouping into exogamous clans, stressing the paternal and maternal lineages so far as to include all the members of the two clans to which these lineages belong. The parallel and cross lines are markedly differentiated. We can say that there is fusion between lineal and collateral relatives --

463 241 handle the milpa. It is rare to find an Indian who does not have a milpa since this is the work that ensures his existence.

Property Rights

423 613 [177] [181] This is a matter that varies according to the degree of acculturation reached by the community. In the most conservative groups (Oxchuc, Cancuc, Tenejapa, Tenango) there are still family property rights, but they seem to depend on lineage rather than on the immediate family (Villa Rojas, 562 428 1947, ch. 19). As these lineages are patrilineal, a woman does not count when inheritance is involved. She can own her parcel of land only when she has saved the money to buy it, but this is not frequent. Any man can claim lands that previously belonged to his lineage, it is enough to give back the money paid for them two or three generations ago. Of course, he has to prove by witnesses or documents that those lands were the property of his lineage.

127 423 613 614 According to a document dated 1861, which I found in the possession of the Gómez Ichiloks (they belong to the Gómez clan and to the Ichílok lineage), residents of the paraje of Tzajalchen of the municipio of Oxchuc, this property system seems to be very ancient. The document is of special interest.

000 DOCUMENTO DE TIERRAS DE LOS GÓMEZ ICHILOK A A

Por pedimento de los ciudadanos Domingo Gómez Ichílok, Tomás Gomez Ichílok, otro Tomás Gómez Ichílok, Miguel Gómez Ichílok, Diego Gómez Ichílok, otre, Domingo Gómez Ichílok, otro Diego Gómez Ichílok y su hijo Diego Gómez Ichilok y por último su hijo menor Manuel Gómez Ichílok, y como antiguamente se acostumbra en este pueblo que segun los hermanos de una propria familia, se les demarca un retazo de terreno de ejido para que en lo sucesivo no haya pleitos con los vecinos como suele suceder, nosotros los Gobernadores, Auxiliares, Justicias, Escribanos y Testigos, pasamos al paraje denominado Tzajalchén a

[P. 211-A]

A A /For a translation by H.R.A.F. of this document, see category 116, p. 225-C--Analyst/

000 ponerles sus mojones y a darles al posesión que les corresponde segun el número de ellos.

"Donde principió parar primer mojón *Busulton Pacton* que está en el camino derecho; 2° mojón *Ozloton* que está en el camino; 3er. mojón *Tzovilton*; 4° mojón *Tequelton*, mojón con Pedro Moreno; 5° mojón *Yolilnelej Lomchen*; 6° mojón de acuerdo con Juan Gómez Bet y Martin Sanchez Chelap se llama la raya *Teguel Canté* que es también la raya con Manuel Chinbak; 7° mojón *Tequelton* raya única con Marcos Hernandez López y Diego López y Diego Giron Vázquez; 8° mojón y último *Basulton Pacton*.

"Habiendo quedado todos los vecinos colindantes contentos, ofreciendo ambos que en lo sucesive no tendrán el menor disgusto, pues, son nativos de su propio pueblo, bajo el concepto que si alguno delinquiese en trastornar el orden en que han quedado, el agraviado lo pondrá en conocimiento del Juez para aberiguarlo y aplicarle la pena que merezca, para acuya seguridad son testigos Lorenzo Ichilok, Martin Solel, Miguel Gómez Ichilok y Gobernadores Diego Méndez Chizna y Nicolas Jiménez Acux. Por los testigos y Gobernadores que no saben firmar. Abril 12 de 1861 y como testigo y escribano Alonso Santis.

423 The descendants of the Gómez Ichiloks
• 613 still live in the same paraje of Tzajalchen
614 and share the same parcel. In other lineages
the original parcel was subdivided on agree-
[178] ment between the interested parties. In this
way single individuals now own pieces of
land, a type of property ownership that is
becoming more general as the old social
organization based on clans and lineages
gradually breaks up.

423 The parcels can be rented to people of
427 other lineages and of other communities.
Often the Tzeltal of Oxchuc rent their par-
cels to natives from Tenejapa or Cancuc
[613] who are their immediate neighbors. Pay-
[614] ment, made with food, chicha, and money,
must be shared by the most important mem-
bers of the same clan other than the ones
of the same lineage (Villa Rojas, 1947, ch.
19).

[P 211-B]

423 592 [184] In the most acculturated communities (Aguacatenango and Amatenango) individually held property is more general. The head of the house is the owner of the parcel and he can manage it as he pleases. Referring to Aguacatenango, B. Metzger (1980, p. 11) states that:

> In general, land is "owned"—that is, controlled—by the household; as long as the son lives with the father, he may speak of "his land," but in fact he works the land with his father, planting what and when his father de- [428] cides. The son who lives apart is usually given a piece of land by his father, and he acquires new land which he, in turn, will pass on to his sons at his death or, if he chooses, before.

• [613] [593] At this level the lineage concept has disappeared, and the only recognized connection is the father-son relationship.

423 Irrigated lands ("tierras irrigables"), however, in Aguacatenango and in Amatenango contain parcels belonging to private owners and parcels used in common, which are administered or given by the local authorities to be cultivated. Metzger (*ibid.*) informs us that: "Recently, land has been bought on the edges of the town by each of the two barrios for the exclusive use of their members, while in the irrigable area the holdings of members of the two barrios are separate and watered by separate canals."

[175] Ejido lands exist in almost all the region, distributed according to the Programa Agrario de la Revolución Mexicana since 1914 but in some communities not put into practice until after 1930. These lands are administered by the "comite ejidal" of each municipio, which gives to any individual who needs land the permission to cultivate it. These lands cannot be sold or transferred in any way, because they are considered common property.

421 586 Family land as well as the house and its equipment belong to the man. When a marriage is dissolved, the woman goes back to her parents without taking anything but

[P 212-A]

556 829 183 know, with the aid of the *naguales* (supernatural spirits), about the wealth each member of the group has; those who have more than necessary must pay for the expenses of fiestas, etc.

Social Organization

Kinship

614 613 The basic elements of the clan system of the ancient Maya can still be found in the most conservative groups. At the present time, the kinship system is divided into patrilineal clans, which are divided into [199] patrilineages. In some cases, the name of the clan is of Spanish origin; the name of the lineage, of indigenous origin. In Oxchuc there are six clans whose names are: Gómez, Santis, López, Méndez, Encines, and Rodríguez. The first two clans are the largest, since the Gómez clan has 37 lineages, the Santis 39. The last two are almost disappearing as they have only one or two lineages. Among the indigenous names for lineages are: Ichilok, Nimail, Akux, Cojton, Chic, Molox, Nich, Antun, Chisná, Tib, and Mulesh. These designate names of animals, plants, or objects.

A man whose name is Juan Gómez Nich, for example, belongs to the Gómez clan and to the Nich lineage. Generally, the name of the lineage is enough to show to which clan somebody belongs; if his name is Juan Nich, it is immediately known that he is from the Gómez clan. This special characteristic of the indigenous name is designated by the word *Jol s'bij*, which means 'head of the name.'

[184] In Cancuc (a community next to Oxchuc) clans have special names, such as Chik, Chejeb, Ijká, and Boj. If the indigenous name is known, the clan name is self-evident. The Spanish name has lost its specific function, and, according to Guiteras Holmes (1947, pp. 4–5), there are Indians who do not even remember it. However, the Spanish surname designates exogamic units of a patrilineal type throughout the region; without

[P. 213-B]

[Text continues on p. 214-B]

4: Villa Rojas E-4, 5 (1938-1944) 1969
NV9 Tzeltal NV9

614 exception, both names (lineage and clan)
613 are inherited from the father.

[178] In the more acculturated communities the
[612] clan and lineage system tends to disappear and to be replaced by the bilateral system,
[582] characteristic of Ladino society. In Aguacatenango, despite the belief that there is a
613 relationship between people of the same Spanish name, they may marry. Moreover, they are starting to be ashamed of using the indigenous name differentiating the lineages. B. Metzger states (1959, p. 18):

[551] Lineage names appear to be used as surnames within the community—as we have discovered

[P. 214-B]

4: Villa Rojas E-4, 5 (1938-1944) 1969
NV9 Tzeltal NV9

613
551 by overhearing them spoken in unguarded moments—but their existence is vigorously denied or only cautiously admitted to outsiders. As a result, we have not been able to discover how these names are distributed in the community, how wide the lineage is, and whether or not kinship terms are applied throughout.

613
[614] In the more conservative municipios the clans are not centralized but dispersed throughout the parajes. Lineages are now fragmented, and the common ancestor is no longer remembered. Generally these lineages are localized in one or two parajes, but neither can remember its genealogy further

[P. 214-C]

613 than three or four generations. In the past, these lineages were localized, and in places like Bachajon, Cancuc, and Oxchuc the exact locations are still remembered.

613 769 778 A few generations ago, the most distinguished members of each lineage were buried in the cave after which the paraje was named, the bones and ashes of the dead being placed in large jugs or urns. The caves were places for ceremonies honoring the ancestors. Blom (1954) made a study of these burials and mapped the distribution of the sites. These caves are still places for worship but not for burials; the cross protecting all members of the lineage is kept there, as well as, in some instances, small crosses belonging to the important members of it (Villa Rojas, 1946, p. 16).

614 The words *chapomal* and *tijinabal* name the members of the clan in general. It is said that "the neighbors of this paraje are all chapomales," or "those cannot get married because they are chapomales." Tijinabal also means neighbor or member of the same paraje. Another word, *patshunk*, is also an equivalent of tijinabal. These words are currently used in Oxchuc, Cancuc, and Bachajon. On the other hand, there is no specific word to designate the lineage.

[835] The main function of the clan is to regulate marriage, as the union of two chapomales is considered incestuous. The clan [574] also gives much self-confidence to the Indian who travels to other parajes, for he can always find hospitality among people of his own clan. It also has a function of social control, exercised by the old men of the group, who punish all transgressors against the established rules. Helped by the nagual (supernatural spirit), they find out about the behavior of the members of the clan and punish according to the crime (Villa Rojas, 1947).

614 626 887

613 428 The lineage relationship is also important in inheritance (especially land), since the plots should always be under the control of individuals of the same Indian name. Only where such persons are absent or missing or

[P 215-A]

613 [428] have no interest in the land is preference given to the chapomales of other lineages. The importance of the lineage is stressed again during events such as curing ceremonies, conflicts, weddings, burials, fiestas, or banquets, where members of the same lineage should be invited first, then the chapomales.

601 The Omaha type of terminology still predominates in the more conservative municipios, where the same names are used for children of the father's sister as well as for children of the ego's sister, while children of the mother's brother are considered to be uncles and aunts on the matrilineal side (Murdock, 1949, p. 102; Guiteras Holmes, 1947, pp. 13–15; J. Nash, 1959, pp. 4–7).

The name *kichan*, given to the mother's brother, is also given to all the patrilineal descendants, stressing the concept that they are regarded as persons from another clan.

The most common kin terms collected in Cancuc by Guiteras Holmes (1947, p. 8) and in Oxchuc by Siverts (1955, pp. 16–20) are practically the same.

Tzeltal	*English*
Bankil	older brother of a man
Xibel	older brother of a woman
uish	older sister; father's sister
Kitzin	youngest brother or sister
Tat	father
Me	mother
Nichán	a man's children
Kaal	a woman's children
Ta-jun	father's brother
Mee-jun	mother's sister
Nicha-jun	the children of a man's brother
Kaal-jun	the children of a woman's sister
Kichán	mother's brother; children of a man's sister
Cha-mam	a man's grandchildren
Kil-al	a woman's grandchildren
Mam	grandfather
Meel-kuj	grandmother
Mamalal	husband
Kinam	wife
Bal	a man's brother-in-law
Jauan	a woman's sister-in-law
Mu	siblings-in-law of opposite sex

[P. 215-B]

[Text continues on p. 216-B]

Though the nuclear family predominates, custom dictates that the house be near members of the same lineage or patrilineal group, perhaps because of the patrilineal system of land inheritance. In the parajes groups of houses in which families composed of mother, father, uncles, and other members of the patriline live are common. No fences mark the limits of the property; their infrequent presence merely keeps the pigs and chickens under control. This group of houses, easily accessible and inhabited by people related by kinship, constitutes the most important influence in the individual's formation, since it is here that he acquires his first experiences and cultural values, as well as the emotional links that will have the greatest weight in his life. This system of patrilocal residence is observed all through the region, even in compact villages like Aguacatenango, where lack of space favors dispersion. B. Metzger (1959) tells us: "Looking at the nuclear families to trace patrilocality there, we find that in 74 cases where we have adequate data, 39 are in the same block and 12 in adjacent blocks with husband's parents or siblings; 11 in the same block and 8 in adjacent blocks with wife's parents or siblings; 4 are classed to neither spouse's family."

In villages or cabeceras of a compact type it is customary to mark family plots by a fence of stones or sticks, with entrance toward the street (Chanal, Sivaca, Amatenango, Aguacatenango.) Occasionally, when the nuclear family is divided because of the marriage of one of the sons, then the "solar" or the "sitio" (as it is called in the region) is subdivided by another fence that separates the portion now belonging to the new family. A door allows easy communication between both families. Sometimes, even three nuclear families live in a large sitio, divided by fences.

Types of Marriage

Types of marriage vary from that following the old traditional to one requiring the

753 thunder, wind, or lightning. All the men
776 who occupy or have occupied cargos in the
[794] political or religious organization are sup-
[888] posed to have a nagual, as do the older
[613] members of the lineage. They consider it their duty to punish those members of the group who have sinned and use their nagual, who can devour the soul of the victim little by little.

774 According to this idea, everybody has two
776 souls: one which can be eaten by the naguales, and one which follows the destiny that its patron saint has planned for it.

761 When death comes, the naguales take away
775 the first soul and have a banquet up in the
776 mountains. In this feast, the naguales of the old people of the clan participate, joined by others induced to comradeship.

761 It is a widespread belief that at midyear
773 the naguales go to a place in heaven called
776 Atimaltik, where an old man who possesses the Book of Life lives. Since in this book he keeps account of the time each person can live, it is a source of information for the naguales, who thus can know who is close to death. When the signature of a person disappears from the book, this means that the person died.

764 People have to keep watch over the body for two days and two nights. It is placed on a wooden plank in the middle of the house after being washed or just given a change of clothes. Two candles are placed at the head. At night friends and neighbors come to keep company with the family. They play harp and guitar and drink chicha and aguardiente. At dawn, the men go home and the women remain crying near the corpse.

[613] Following the ancient custom, the dead are buried near the graves of other men of
[184] the same lineage. In Cancuc, however, dead are buried inside the house.

The bottom and sides of the grave are covered with slabs to form a coffin. The corpse, bundled up in a petate, is placed inside. His clothes and other articles he may

Amatenango del Valle

waters. The curer brushes the patients with branches of the cooling bushes and herbs growing near the spring, the same ones used in the fiesta of inauguration and the curing ceremonies conducted in the house. The strategy of making the house spirit happy by providing music, dancing, and drinking is repeated at the spring to make the water spirit happy. Some of the family of the patient must remain in the house as "waiters" (*maliwanehetik*) to receive the spirit if it should arrive before its owner. The maliwanehetik must drink as much liquor as the participants at the spring.

The Cave of the Ancestors. The ancestors, the *me?tiktatik*, were believed to have lived in a cave in the hills lying on the peripheries of the township. In the myth that follows, they are given a historical identity as two brothers, the Shuntonetik. Shunton is one of the Tzeltal patronyms of families still living in the town, and in fact the narrator of this version of the myth is Mariano Shunton, whom people consider a descendant of the ancestors.[6]

Formerly a priest asked for a document to be delivered to Antigua in Guatemala. Two messengers were sent with it, but they did not return. Another messenger went and did not return. Four or five more messengers were sent out and did not come back. Finally they sent a man from the cabildo with his younger brother. They left early in the morning, and the elder brother said as he left the other town officials, "If I succeed, I want a fiesta. Look for my sign of four arches [rainbow]."

The two brothers first went to a hill. There they called upon their swayohelik [*animal spirits*]. *First the animal spirit of the elder brother spoke. He said, "I am a stone." Then the animal spirit of the younger brother said, "I am a stick. Moreover, I am a snake and a maguey plant." The elder brother said, "Then we are well off. Let us go."*

6. The same identification of a lineage patronym with the most important sacred hill is found in other Tzeltal- and Tzotzil-speaking communities (Holland 1963, Hermitte 1964). The pattern may have originated in a period of pre-Conquest expansion when the dominant lineage was assiged a custodial leadership over the new settlement, with their spirits remaining as guardians of the community. Members of the contemporary communities who bear the same patronym do not have any privileged position. These associations of past and contemporary belief are, as Vogt (1964:216) cautions, still hypothetical.

Chapter 4

Family Authority and Community Control

All residents of the center consider themselves to be "true men" descended from the ancestors who lived in the cave. In Murdock's terminology (1965:63), the Indian community constitutes a *deme*, or local group of genealogically related residents who cannot trace the exact kinship tie. This sense of kinship sustains a model of paternal authority for assigning positions of power and prestige in the wider community. The key to persistence of the Indians as a culturally distinct population lies in these age-ordered hierarchies sanctioned by the ancestors and the elders who act as their intermediaries. The reward for remaining within the social control system is security and the right to their guardianship; the sanction against violating the norms is exile or exposure to the evil spirits they hold at bay.

The bilateral extension of age-relative collateral terms to all members of the same side of the dual division is a successful adaptation of the kinship model to the government of a compact nucleated community. The system of terminology is similar to that of the neighboring nucleated settlement of Aguacatenango which shares many of the same features of behavior (Hunt n.d., Metzger in Romney 1967:231). These systems are closer to those of the Coatlan Mixe (Merrifield and Hoogshagen 1961) and the Chinantec of Palantla (Merrifield 1959) than they are to the nearby Tzeltal-speaking communities of Cancuc (Guiteras Holmes 1947) and Oxchuk (Villa Rojas 1947). In the case of the Mixe and Chinantec, the strong emphasis on relative age is correlated with age-graded positions in the political-religious hierarchy (Merrifield 1959, Merrifield and Hoogshagen 1961:225).[1] The lineage-clan pattern found in the vacant center, or *paraje*,

1. In the Coatlán, Oaxaca case of Mixe Indians cited by Merrifield and Hoogshagen (1961) they state that the classificatory terms utilizing the criteria of age relative to ego

7: Nash E-5 (1957-1967) 1970

NV9 Tzeltal NV9
Amatenango del Valle

type of communitives such as Oxchuk and Cancuc depends on communal land holding and contiguity in residence of the agnatic kin. The corporate identity of these groups is breaking down with the fragmentation of land holdings and movement of men from the paraje of their fathers (Guiteras Holmes 1947, Villa Rojas 1946).

Symmetrical bilateral extension of kinship terms can be seen in Figure 3. Relative age modifies generation in terms for collaterals. In ego's generation, older brother and sister are distinguished from younger siblings. In parents' generation, siblings of father younger than father are referred to and called elder brother or sister, and those older than father are called father or mother. In grandparent's generation, siblings older than grandparent are called grandfather or grandmother, and those younger than grandparent are called father and mother. If the grandparent should die, leaving only a younger sibling, the term grandparent is used referentially and vocatively. There is no sex distinction made between siblings or collaterals younger than ego in the referential terminology. Referential terminology for lineals younger than ego does not make sex distinctions, but the distinction may be made with one's own children by using the possessive form of the vocative term, such as "my little man" (*htatil*) or "my little woman" (*kantxil*). Women refer to their children with the term *?alal*. The stem *?al* signifies the verb to give birth. Men refer to their children as *nič'an*. The collective term for children of both parents combines the two terms in a possessive form, *kalnič'an*, our children.

The bilateral system of Amatenango is not in conformity with the Spanish model. Along with similar systems mentioned for Aguacatenango, Coatlan, and Palantla, it differs from the Spanish model in that collaterals in ascending generations are classified with lineal relatives, and age relative to ego modifies generational separation. These systems appear to be an

---

obscures that of generation. Just as in Tzo?ontahal, all members of the community address others they meet on the street with the term indicating age relationship to ego, and grandfather and grandmother terms are reserved for the very old. The authors conclude that this terminological behavior reflects the rigid age-grading found in social groups throughout the community. I would venture a generalization that requires further research to the effect that age-grading provides a pattern for appropriate behavior among members of endogamous, closely settled communities whereby conflict is reduced by channeling competition for prestigeful positions.

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

term derived from compadres; and bersinatak, meaning the neighbors, is derived from *vecinos*. When informants are asked to summarize who participates in rituals, these three groups are always mentioned. They are not exclusive groupings; neighbors or siblings may be chosen as compadres, in which case the reference and vocative terms for compadres are preferred to any previous terminology. Activation of any of these ties depends on choice and convenience. Proximity of residence is of greater importance in day-to-day exchanges of assistance or visiting than closeness of genealogical tie. Interaction rates have been quantified in an earlier study of the community (J. Nash 1960; 1964).

Another way of referring to the yermanotak is with the plural form of the Indian patronym. Members of the Shunton family would, for example, be called the Shuntonetik. Several Indian surnames are linked to a Spanish patronym. For example, the Shunton, along with Lin, Mai, and Wolto? are linked to the name Lopez. In other Tzeltal and Tzotzil-speaking communities, these Indian surname groups have a greater cohesiveness, and in the recent past held corporate lands which they worked in common, as in Larraínzar (Holland 1963), Oxchuk (Villa Rojas 1947, Siverts 1960) and San Pedro Chenalhó (Guiteras Holmes 1961). In these towns, the Spanish patronym designated a clan marked by exogamy and responsibility of the elders for maintaining social control. In Tzo?ontahal, the tie of descent has given way to an emphasis on collateral links. Exogamy of the Indian name group is the only surviving function of the lineage, and when this has been violated, there are only minor repercussions.

While the Spanish-derived collective terms are restricted to domestic groupings, the Tzeltal collective term for elders, me?iltatil, refers to the three central groups responsible for social control in the community. Derived from the terms for mother, *me?*, and father, *tat*, it is metaphorically extended to include the sponsors in household ceremonies, the curers acting as guardians of their side of the dual division, and the civil officials. Each of the groups is vested with a different level of authority in the community. This is summarized briefly below.

1. Household sponsors: The Spanish institution of ritual godparenthood has been fused with the indigenous system of sponsorship by me?iltatil. When a child is baptized, his god-parents are included as

CHAPTER VII

CORPORATE GROUPS WITHIN THE VILLAGE

Historical Perspective

174 611 591 601 583 423 422 It is probable that the communities of Amatenango and Aguacatenango had, at some time in their past, a patrilineal organization based on agnatic descent, patri-virilocality, a kinship terminology of the Normal Omaha type, and other associated features such as bride-price, groom service, patrilineal control of the rights to land usufruct, and patrilineal inheritance.

174 613 614 621 626 Each agnatic descent group formed segments of a corporate lineage, and several segments formed a sib. Lineages were localized, and they had important social functions. The heads of linear segments formed the local government and had the responsibility of controlling conflict and sanctioning individual behavior through the supernatural. They were believed to "own" powerful animal counterparts of their souls, which patrolled the village during sleep, and punished the misdemeanors of those men belonging to their line of descent. It is also probable that the lineage was [582] an exogamous unit, and there is some scanty evidence which points to the practice of cross-cousin marriage.

127 The evidence to support this hypothetical statement is of two types. On the one hand, there is some historical documentation in published, as well as manuscript, form. On the other hand,

8: Hunt E-4,5 (1958)1962 NV9 Tzeltal NV9
Amatenango .
Aguacatenango

127 every Chiapas Highland community, including some highly accul-
611 turated towns such as Venustiano Carranza (McQuown et al., 1959).
128 Amatenango and Aguacatenango both have patrilineally in-
611 herited name groups and other slight indications of the previously hypothesized patrilineal "bent" (e.g., bride-price). Our problem, however, is not to reconstruct a hypothetical past, nor to assess the possibility of a change from patrilineal to something else. In this study, the discussion of the name groups will be carried on in the context of their functions, if any, at the present time.

Functions

If the theory of functional correlations between residence, kinship terminology, marriage customs, exogamy, etc., has any validity, we would suspect that Amatenango, with a domestic group organized along bilateral lines and matri-uxorilocal and viri-patrilocal residence having equal incidence, would not have unilineal descent groups, while Aguacatenango, with patri-virilocal residence and a domestic group organized around a core of agnatically related males would have preserved or have now (if it ever had, a fact which at the present we cannot emphatically support), an organization based on agnatic lineages, or it will show some aspects of a lineal organization outside the realm of the domestic unit.

591 In Amatenango, as suspected, the name groups "are not now
[613] functioning units in the social organization, neither on marriage, inheritance or social control" (Nash, J., 1960:5). Work activities, rituals, participation in community-wide sodality groups or festivities, compadrazgo ties, etc., are carried on by the household

8: Hunt E-4,5 (1958)1962 NV9 Tzeltal NV9
Amatenango
Aguacatenango

121 population, such as an endogamous village, ought to be bilateral societies. This is obviously not so. Even if we assume that our statement is a reductio ad absurdum of Nash's point, there is evidence in the immediate vicinity of Amatenango that other villages, equally concentrated in population, with the same physical setting, are not bilateral. J. Nash (1960) compared Amatenango and Aguacatenango in a few paragraphs, and she felt that the evidence supported her theory. However, the data available to her was very unreliable. She quoted a preliminary report of Metzger written before the residence analysis of the community was carried to completion, which contained only impressionistic observations, and gave the impression that residence was neolocal and that agnatically related households were widely spread within the community, which we have shown in chapter vi not to be true.

Moreover, Aguacatenango not only has patri-virilocality, but corporate patrilines. The name-groups in Aguacatenango form localized agnatic descent groups (which we above called the localized clusters of agnatically linked households). The people belonging to a name-group are recognized as relatives or, in Tzeltal, "those who are my family on my father's side." Those individuals have one last name (Indian surname) in common with Ego. Within the Spanish surname, some people are considered in the descent group and some are considered aparte (separate), but a man of the Spanish name Perez, would say that all those Perezetik who are not aparte belong to his family, and any Perez is "closer" to another Perez than to a man of another Spanish name. The reason for the segmentation of the Spanish name-group is lost in the past. When the lineage system was composed of

8: Hunt E-4,5 (1958)1962 NV9 Tzeltal NV9
Amatenango
Aguacatenango

174 segments of different breadth of inclusion, it is possible that
613 the Indian last name was a smaller lineage segment than the
551 Spanish last name, or, as it occurs in other Chiapas villages, that the Indian name was the lineage name and the Spanish name the clan name, but that clans have disappeared in Aguacatenango. The result is that there are more Indian than Spanish names, and sometimes a Spanish name, such as Hernandez, has within it the patrilines Wayal, Obispo and Chalté, while Perez has the patrilines Ich, Tuluk and Chauk.

613 At the present time, the patriline is very shallow. Connections are lost frequently after the second ascending generation and the localized agnatic line includes only three, or at best four, adjacent generations, when the linking relative in the higher generation is still alive or recently deceased and still remembered.

613 The Indian name, which indicates the patriline, is not
551 known by many people in the younger generation, and older people are reluctant to mention the subject. With the influence of the
[829] Mexican system of naming (which includes both the Spanish last name of the father and the mother), the older villagers are becoming aware that westerners do not have the same descent name system, and are embarrassed to discuss this subject with non-villagers, although in Tzeltal conversations among themselves they identify people through them.

126 We did collect some patriline names (which are Tzeltal
613 words for animals and natural phenomena), but unfortunately the
551 limited field-work season did not allow for more detailed
602

Aguacatenango

126

613
551
602 investigation, so that we could not pin down all patriline names to the respective genealogies.

174
613
551
582 We do have evidence, however, that the patriline is (or was) exogamous. In the first place, the villagers are very insistent that "people of the same name should not marry," and at the present time, this rule seems to be influencing the choice of marriage partners even in the Spanish name group; on the other hand, we have one case which explicitly indicates so: one of the village women, Ceveriana, reported that when her present husband asked her to marry, she was very worried that her marriage was going to be "sinful" because both she and her future husband had the same Spanish last names: Hernandez. Not knowing what to do, they consulted a village elder, who asked them for their Indian last names. When he found out that their Indian surnames were different (Wayal and Chalté), he reassured them that it was permitted for them to marry "because they did not have the same Indian name." (See genealogy, Fig. 14.)

613
551
582 Patriline exogamy, however, does not seem to be associated with preferential marriage. In other villages in the highlands of Chiapas, the informants state that it is preferred to marry a woman of one's mother's name group. In Aguacatenango, however, out of 161 marriages in which all the relevant names were known, only twenty-three men had married women of their mother's name group. Even in the case in which preferential marriages would be the ideal choice (and they never have been stated as such), the practice does not follow it.

• 613 476 [602] The patrilines function in several dimensions. Work groups, although invariably containing some bilateral and affinal relatives, recruit members mainly among agnatic kinsmen. Men fence their fields with the help of their brothers, father and sons; when villagers get together to buy a cow for a town fiesta celebration, each cow is bought by a group which contains agnatically related men. In one case, seventeen men who bought a cow together belonged to four patrilines which were neighbors among themselves. In another case, in which several men got together to build a house, nine were agnatic kinsmen, three were affinals (the son's wife's brother, the daughter's husband and the wife's brother), three were compadres and one a neighbor from across the street. The women who prepared the meal for the housewarming were: nine agnatically related to the household head; two agnatically related to the wife of the household head; three affinals of the household head; two affinals of the wife; and two neighbors. In another case, a man and his two sons, one of whom was living in a separate domestic group, helped in the construction, and several other men were contracted to help with the payment, although the daughter's husband, who was a carpenter, was called in to give advice and help.

613 621 476 [432] [462]

613 476 626 627 Individuals, in time of trouble, seek advice from the elders of the patriline, which is the largest unit in which kinship solidarity functions as a controlling social force outside the domestic group. The patriline also exercises control in the form of moral pressure: gossip, accusations of witchcraft, and responsibility for vengeance when a patriline member has been

613 murdered. Informants declare that "all the Mendeztik will get
476 together against the Perezetik if a Perez kills a Mendez." We have
626 witnessed cases of "talk of revenge," but never any case of the
627 lineal solidarity functioning in this way in practice. In a case
613 where the father of a man dies, it is within the agnatic line that
736 a man finds a sponsor to live with, to pay his bride-price, and to
613 work the land with. If there is conflict over an adulterous wife,
837 or over the distribution of an inheritance among brothers, it is the
428 duty of the elder members of the agnatic line to give advice, witness the distribution of the property, etc.

613 The patriline is not a land holding unit, in the sense that
423 there is no land that is said to belong to the line as a corporation, but the group of agnatically related men have control over the distribution of it, and its inheritance. If a man dies without adult sons, the closest agnatic kin (father, brother, or in some cases a father's brother if the other two are dead or have enough land) will take over the cultivated fields that he has left. According to the Mexican Agrarian Code, Ejido land can only be transmitted to people that live in the same domestic unit, and communal land cannot be transmitted at all: at the death of the person who held usufruct rights over a parcel, the land should revert to the Ayuntamiento, which has the power to re-distribute it as it considers convenient. In practice, in Aguacatenango, if the household fails to provide heirs, the parcels (both ejido and communal) are re-allocated among agnatic kin. Therefore, although the patriline does not "own" land, some land is allocated through linearity.

linearity. The widow is expected to give back to them the house site and house in which they lived, and go to live in her own parental home. In one case, a woman who had kept the house in trust for her sons, asked permission to sell the lot (which originally had been given to her dead husband) from a living male sibling of the deceased.

There are no ritual functions which have to be performed by the patriline. Aguacatenango rituals are carried on by the household, by the part-time ritual specialists (curanderos), or by officially appointed town officers (the Mayordomos).

This type of "lineage" seems to fit Homan's definition of "weak" lineage, because he considers the following characteristics as defining a weak lineage: (1) few (less than four) generations in depth; (2) narrow spread of linearity counted at any given time for each generation; (3) locality limited to a few people; and (4) incest rules pulled towards the smaller local units and mainly restricted to the nuclear family. The characteristics of a strong lineage, in contrast, are: (1) many (more than four) generations in depth; (2) wide spread of linearity counted at any given time for each generation; (3) maximal localization of residence and maximal sharing of activities within the lineage; and (4) incest rules pushed away from the local units, to embrace all relatives within a lineage (lecture in the Oriental Institute, April 22, 1959, unpublished). However, I prefer to call them patrilines to distinguish them from the more elaborate agnatic descent groups common in Africa, from which they are distinguished by (1) the lack of genealogical depth; (2) the absence of the use of genealogical

121 manipulations for political purposes; and (3) their restricted
613 functions.

174 Why is the patriline this weak? There are reasons of
613 an historical nature, as well as functional reasons. First, with the centralization of political power created by the Spanish colony, in which each household head, independently of lineage affiliation, became a tributario (tax payer) and had rights of participation in the political structure, the political functions or the lineage
613 became debilitated. At the present time, it is only through the
624 principales that the patriline as a unit has political representation. The principales are usually the elders of the largest patrilines in the community. To make decisions, they have to have the backing of the men they represent. Belonging to a larger line indicates that a man is capable of controlling a larger number of household heads and, therefore, has stronger political support. That being the head of a large patriline gives a man authority in village affairs is shown not only by the fact that principales are thus supported, but also by the fact that patriline elders, even if they are not officially principales, on occasions can act as such, and they are sought after for advice in making Ayuntamiento decisions, by their own people and by other villagers.

174 Second, with the relocation of the lineages at the time
423 that the village was reducido, and the control of the lands by the
613 Encomienda and the Spanish crown and later by the fincas, some of the lineage control over its lands was lost. It is possible, however, that before the agrarian reform, when the village lands were scarcer, the land holding rights of the patriline were more precisely stated.

000 precisely stated. Today, with the total increase in land holdings,
423 the influence of the Ejido Commission (however minimal) and the
621 introduction of a money economy in which land is becoming more
592 and more of a commodity that can be bought and sold, in terms of
198 contract transactions, land tends to be thought of as individual
[593] household property. There have been several cases in which brothers have bought land from each other, although they are the people from which a line member can expect to obtain land, or in the absence of it, the necessary help to clear and fence a new parcel in forested communal territory.

178 Other reasons for the constant breaking of linearity,
• 613 which reduced the patriline to a very shallow group, are inherent
593 in the system itself. First, the antagonism between brothers over
423 property rights tends to make the sibling group weak, and agnatic lines split in each generation.

593 Insofar as siblings occupy an equivalent position with
[592] respect to the elders in the household, their sentiments towards one another are easy and affectionate, but insofar as the elder sibling has jural authority over the younger ones, the relationship is marked by constraint, respect and a certain ambivalence.

Thus, siblings are expected to love each other, to give each other company, to help when necessary, and to share, in some aspects of their life, a common position with respect to the community at large, or what Homans calls the external system (1950: 90-94).

The equivalence of siblings, especially those of the same sex, is evident in many observations. A man whose brother is

159 422 593 578 During the branding of animals in the village, Francisco received a letter from Candelario asking him to brand the cow and calf for him. Francisco and his son, Epifanio, did so.

This started the conflict. Jose Mendez, Juana's brother, felt that the cow and calf did not rightfully belong to Candelario, nor to Francisco or Epifanio, but to him. Epifanio had a fight with Jose, and the latter, insisting on his rights, which were not very clear, stated that Candelario had sold him the cow (which was not true), when they were working in the lowlands together. Casimira, Juana and Jose's mother, supported Jose's claims over the animals, because it was the money obtained from Juana's bull that had paid for the cow that had the calf. The relatives of her daughter's husband had less right over the animal than Juana's brother.

It is possible that Jose felt that the cow and calf had been purchased with the money obtained from selling a bull which was originally his father's, not his sister's. Even if it was his sister's, he felt he had more right to use it than the sister's husband's brother and father. If owner of the bull or the cow had been a brother rather than a sister, the conflict would not have arisen. (For genealogy see Fig. 17.)

177 178 754 796 613 Third, with the introduction of Catholicism, although the native belief system has preserved many of its early features, it is now, without doubt, a new syncretic elaboration. The pervasive witchcraft powers are, for example, attributed now to Catholic saints, but the concept that the lineage heads of principales have witchcraft power to punish deviants within their

[TEXT CONTINUED ON PAGE 195]

Amatenango
Aguacatenango

177
178 lineage (which exists today in many other communities such as
754 Oxchuc), has disappeared. Without the basic belief in the super-
776
613 natural controlling powers of the lineage heads, the ritual activities performed by the lineage as a corporation became meaningless, and fell out of use.

592 Finally, from an economic point of view, the large patriline
613
434 household-compound, as a productive unit, is unfunctional, and the
421 characteristic form of the domestic group is now the nuclear house-
578 hold, which also contributes to the weakening of patriline strength. Within the nuclear household, it is difficult for its members to discriminate between the part of the household income that is derived from the household head in his capacity as a worker and that which is from his unmarried sons; between those profits which are derived from the household head as a capitalist who has provided tools and implements, and finally those which come from his capacity as "owner" of land. In a larger household, differences in labor in-put, rivalry between the women about the food controlled by themselves and belonging to their husbands, or between the men about the property rights of the produce derived from their common effort, tend to create conflict and disunity. In the
592
594 nuclear household, the division of labor is explicit, the role ex-
578 actly and minimally distributed, and conflict, in the case of its occurrence, is likely to be more quickly solved because the fission of the nuclear domestic group is equivalent to the disappearance of the household itself.

178 The functions before performed by the lineage are now
613
592 performed by the household, the community, or by the neighborhood
621
591
184

Amatenango .
Aguacatenango

178

•613 group, composed in Amatenango of bilateral relatives, and in
592
621 Aguacatenango, mainly of agnatic kinsmen, but also including some
591 affinals and non-related people, because contiguous household-to-
184 household localization is an ideal not always realized (we have discussed previously how in some few cases a son lives in a house given to him by his father, but one block distant from his father's own compound).

178 The result of this complex set of variables is that the
184 lineage has lost, in Aguacatenango, some of its characteristic
591 functions. The Amatenango case, to extend the example, shows how,
562 even when (1) patri-virilocality disappears (as a consequence of
613 the women participating actively in the economy), and (2) the status of the sexes with regard to inheritance and rights over property becomes equal, the lineage disappears leaving only small traces of its previous presence: name groups without meaning or function.

184 182 428 592 (4) The reciprocal financial obligations between parents and children in Amatenango, and between parents and sons in Aguacatenango, to support each other at different stages of the developmental cycle of their respective domestic groups affect the rule of ultimogeniture.

184 182 582 591 556 (5) The relative wealth of the natal domestic group of the spouse, measured by the amount of land controlled by the unit affects (a) the choice of marriage partner, and (b) the residence of the newly married couple. In Aguacatenango, where residence is normatively patri-virilocal, parents try to marry their daughters within the same economic level of their own households. In Amatenango, marriages occur across wealth lines, and the couple reside with the parents of the spouse who are better off.

184 182 462 478 593 (6) The relative importance of men versus female cooperative work groups, and/or the difference in structuring of work groups affects (a) the sibling bond; (b) the mother-daughter bond; and (c) the mother-in-law-daughter-in-law bond.

[606] In Aguacatenango, where only men form cooperative work groups, the brother-brother bond is stronger than the sister-sister bond or the brother-sister bond.

In Amatenango, where both males and females form cooperative [607] work groups, the multilateral sibling bond is reinforced to the point of including siblings-in-law.

184 593 598 591 In Aguacatenango, economic rivalry between siblings tends to disrupt the brother bond with constant conflict. Thus, relationships are more vertically oriented which is consistent with the [613] presence of agnatic descent lines (in Amatenango, generational

184 solidarity is stronger than cross-generational solidarity), but
593 generational conflict tends to disrupt the collateral extension
598 of patriline growth, making every patriline segment a shallow
591 descent group containing few generations in depth, and only few
613 collaterals.

184 (7) Territorial propinquity between households in each
36 village follows the social propinquity established in terms of eco-
592 nomic reciprocity and work interaction. Thus, in Amatenango resi-
476 dence for individuals, interaction between households and the settlement of a neighborhood follow a bilateral pattern, while in Aguacatenango the three follow the male and agnatic line. The type of economic organization, based on the domestic group, correlates with the type of domestic group formed thereof.

184 The domestic group in Aguacatenango, with an internal
59 economy based on the cooperative work of father and son and the
428 transmission of property in the male line, is a kinship unit built
562 around a core of agnatically related males with patri-virilocal residence. Among the Aguacatecos, at least one son of the nuclear family remains in the parents' household after marriage. All other children marry and move out, the sons staying close to the father. In this way, the family continues through time, from one generation to the next, as a perennial corporate group of agnatic order, which extends itself in space as a patrilocally localized agnatic line, and perpetuates itself, in time, through the principle of agnatic ultimogeniture.

The domestic group in Amatenango, with an internal economy based on the cooperative work of both a father and son, a mother

8: Hunt E-4,5 (1958)1962 NV9 Tzeltal NV9
Amatenango
Aguacatenango

184 591 586 602 the father is preferred, while in Amatenango, both paternal and maternal relatives are equally good choices.

184 736 591 434 9. In Aguacatenango, where widows are incapable of supporting the economic demands of the household by themselves, they choose to reside with a male sponsor in another household, while in Amatenango, they can be self-sponsors and the heads of their own domestic groups.

184 621 582 591 10. In both villages, residence within one's barrio is preferred over residence in any other territorial division. In Amatenango, cross-barrio marriages are accompanied by matri-uxorilocal residence as well as patri-virilocal residence, which results in both men and women residing in a barrio other than their own (11 per cent and 16 per cent respectively). This results in Aguacatenango barrios being related only through the circulation of women between them, while in Amatenango, both men and women are transmitted between families across barrio lines, in both directions.

184 621 602 [592] The structuring of economic and residential sponsorship produces two different types of neighborhoods in the two villages. In Aguacatenango, the neighborhood tends to be a cluster of agnatically linked households, while in Amatenango, it is composed [613] of a set of kindred. The barrio in Aguacatenango, then, is a [562] territorial division containing neighborhoods which are localized agnatic groups, which I call localized patrilines, with few non-relatives and bilateral kinsmen enclaved throughout the blocks; a man does not separate from his territory or barrio, nor from his neighborhood, while a woman circulates within neighborhoods after 184 621 591 marriage and even within barrios. In Amatenango, both men and
